

OPTICAL BIRD WAX

A non-toxic, bio-degradable, wax for application onto surfaces to be protected against bird infestation.

Optical Bird Wax is a visual deterrent that works by reflecting the UV light spectrum to disturb and deter birds. (They associate this with fire)

The product contains natural beeswax and is safe to use on any surface.

The product will remain effective for up to 2 years outdoors and up to 5 years indoors.

Directions:

The wax will be harder to apply in cold weather.

For easy application, place the tube in the sun for 15 minutes, or in hot water for 10 minutes.

Apply a thin line of Bird wax on the surface to be protected (2-3mm in diameter).

Apply more than one line on broader surfaces or make a zig-zag pattern.

One tube can cover 5-6 linear meters.

Not to be used in temperatures below 0°C or above 50°C

To remove the wax:

Scrape off the excess and wash with paraffin.
